

soap in warm water. Soak the microfiber cloth into the solution and tightly wring out the cloth, so as to prevent the solution from dripping down through the keys inside your laptop.

- III. Thoroughly rinse all the soap from the dampened cloth, wring it again, and wipe the screen once more to remove soap residue, if any.
- IV. In the end, gently wipe your laptop screen with a clean and dry microfiber cloth.
- V. If your laptop screen is made of plastic, carefully use alcohol or any other chemical solution as it might destroy the laptop's finishing.
- VI. You can even use cleaning products, like purpose-built brushes, to make your task easier. Removing the dust accumulated inside the chassis is the best cleaning solution that can be done either by opening the chassis or blasting it out with compressed air.
- VII. Before cleaning a MacBook at home, ensure that you have read about Apple's unique cooling system.

Keyboards

Cleaning your keyboard is highly recommended because a clean and hygienic keyboard enhances the user's typing speed and experience. Both, for computers/laptops, first shut down the desktop and unplug it. And, then unplug the keyboard from the computer or laptop. In the case of a wireless keyboard, removing the batteries is also a must. For the internal laptop keyboard, removing laptop batteries is necessary.

- I. Most keyboards can be cleaned piece-by-piece. To begin with, remove the keys and spray canned air on the keyboard to blow away all the dust particles from the top and out of the chassis. Hand vacuums and purpose-built brushes are also recommended, but only in cases when the keycaps are not removed.
- II. After this, you can lightly dab a cotton sponge either in isopropyl alcohol and ethanol or in gentle rubbing alcohol, but do not dab the sponge excessively in the alcohol-based solution as it comes with a risk of flowing in between the keys.
- III. Do a spot test to make sure that alcohol does not remove any letters
