

How To Secure Your Wi-Fi

Learn to secure your Wi-Fi and control who has access to it

Wi-Fi (Wireless Networking) is something everyone uses nowadays to access the internet on their mobile, computer, tablet, laptop or any other devices. It will let LANs (Local Area Networks) operate without any wiring and cables. You are able to connect your device with the Wi-Fi within some distance of the router and access the internet.

Wired signals vs. wireless signals:

Even though Wi-Fi is very convenient, it is not as secured as traditional
