

Step 3: Once you are done making a copy of your current BIOS setting, use the same tool to select the image of new firmware from your USB drive.

Step 4: after your BIOS detects the new firmware, click the button to start the firmware update process. Do not stress yourself if you see an update is taking a bit of time, but make sure you do not turn off your PC. This is something many people do when they see the update being stuck for 2-3 minutes. It happens quite frequently, but you don't have to worry about it. Give your system some time, and eventually, the updates will finish.

Step 5: Now, once the process of the firmware update is complete, you now safely restart your computer and check using the same 'msinfo' option to see if the operation was successful or not.

Benefits of keeping your BIOS up to date

Let's see what we get after all the hassle of updating our BIOS firmware.

1. First, when you are using a system that you have built 5 years back, there's probably a chance that you might have made some changes in the hardware of your gaming rig to play games at a much higher frame rate and with better graphics.
2. To make your motherboard work in sync with your latest hardware, you need to update your BIOS. Otherwise, you won't be using your hardware's full potential.
3. Also, with new motherboards, we do come across stability issues like there are issues with your processor not being able to use all its core or your GPU is running on lower voltage. All these problems can occur due to your BIOS being outdated.
4. Memory compatibility is another issue that a lot of people face when they don't upgrade their BIOS.
5. Sometimes computer owners face this one issue where the motherboard doesn't even show the second stick of your RAM. If you are the one suffering from the same problem, it's time to update your BIOS.
6. An update will help your system to perform best. It also secures it from any kind of BIOS attack, which could potentially roast your hard drives and overheat your processor to make it stop working forever.

Precautions you need to take before you update BIOS

If you have recently bought a computer, one thing your computer guy must have told you is not to upgrade anything on your own and always call him
