

Note: To delete most of the files, select the one day option in the drop-down menu. If the Downloads folder contains essential files and folders, firstly change the location of those files and folders before running Storage Sense.

7. Select the locally available cloud content section, and use the drop-down menu to specify how long OneDrive content synced to the device becomes online-only.
8. Select the Free up space now section, and check the Delete previous versions of Windows option. This option deletes almost 10GB to 20 GB space from your computer.
9. Click the Clean now button.

Once all the above steps are completed, Storage Sense will run and delete all the unnecessary files and folders from the system.

Enable Storage Sense

1. Open Settings
2. Click on System and then on Storage.
3. In the Storage section, click the Configure Storage Sense or run it now option.

4. Switch on the Storage Sense toggle button.
5. This feature can run automatically if it is selected using the Run Storage Sense drop-down. The options are:
 - a. Every day
 - b. Every week
 - c. Every month
