

d. During low free disk space

Once the above steps are completed, Storage Sense will run according to the specified schedule.

Remove temporary files

Storage sense can be used to delete all the temporary application files and folders. Follow the steps once you have Settings open:

1. Click on System and then on Storage.
2. Under the Local Disk(C:) section, select the Temporary files option.
3. Clicking the Temporary Files options opens a list of contents that can be cleared up to free up space in the system.
 - a. Downloads.
 - b. Temporary files.
 - c. Windows upgrade log files.
 - d. Delivery Optimization Files.
 - e. Thumbnails.
 - f. Temporary Internet Files.
 - g. Windows error reports and feedback diagnostics.
 - h. DirectX Shader Cache.
 - i. Setup Log Files.

Note: The above list of items may vary on your personal computer.

4. Click the Remove files button.

All the temporary files will be deleted

Remove files using disk cleanup

Following are steps to delete files using disk cleanup:

1. Click Start.
2. Search Disk Cleanup and select it.
3. Use the Drives drop-down menu to select C: drive.
4. Click OK .
5. Click the Cleanup system files button.
6. In the list, select the checkbox for the options to be cleared for free space:
 - a. Windows upgrade log files
 - b. Downloaded Program Files
