

How often should you defragment your hard drive?

Run defragmentation whenever you install more than one software on your PC. Although running defragmentation rarely damages your files, some experts recommend not defragmenting hard disks too often.

Make adjustments in power options

By default, your system stays in the ‘balanced’ power mode, which generates appropriate performance and energy. Opting for ‘high performance’ mode can dramatically enhance the speed of your system. Moreover, you can also create a custom plan as per your requirements. Go to the Control Panel, click on the ‘hardware and sound’ option. Then select the ‘power options’ and click on the ‘create a power plan’ button. Once you do that, give a name to your ‘plan’ and click on ‘Next’.

Disable performance-draining software

How to identify performance-draining software?

You can get information in the task manager. To access the task manager, right-click on the taskbar and select ‘Task Manager’. Now click ‘more details’ to access more advanced options. The bar displays all the apps running on the background as well as their CPU, memory, and disk usage status.

By clicking on each header, you can sort the applications consuming most of your CPU, memory, and disk. Now, if you find an application hogging your system, try to close it from the source. If that doesn’t do it, right-click the program from the task manager and click ‘End task’.

Turn off Windows tips and tricks

Unless you are entirely new to Windows, running the ‘windows tips and tricks’ service in the background hardly matters.

To disable this option, you need to launch the ‘setting’ window by pressing the Windows key and letter ‘I’ at the same time. Alternatively, you can also open ‘setting’ by right-clicking the windows button and select the ‘setting’ option.

Once the ‘setting’ windows open, click the ‘system’ icon. Then, click on the ‘notification and action’ option. Then on the right pane, you will notice a lot of checkboxes. Scroll down until you find the ‘get tips, tricks, and suggestions’ checkbox. Then, uncheck the box.

Limit the number of startup applications

We know it’s convenient to have your favourite programs startup as soon
