

clarify doubts. Students should be encouraged to start discussions regarding concepts and assignments so that they can provide feedback and help in enhancing the live class quality. Educators can ask them to fill up a questionnaire with open-ended as well as closed-ended questions, at the season's end to know their detailed opinion about the online class, tools being used, as well as the teaching methods. Asking them for suggestions is also a great idea for making them feel participated as well as leaving no stone unturned for improving the class through restructuring or making adjustments.

Starting an online class won't be perfect initially, but if the content and teaching techniques are consistently improvised by taking the feedback of students, perfection can be attained.

Conducting an online class is the best thing that teachers can do for students during this critical phase of the global pandemic since safety comes first. With the myriad of options available for conducting online classes, it depends on the teachers which one they choose based on their goals and context. Educating students is also possible through the use of pre-recorded videos, but it goes to the next level when teachers opt for conducting online live classes through video streaming.

Since online education is new for most of the educators, they need to put in effort consistently in refining their teaching methods and making use of new tools and techniques, to deliver their best. Thus, more students will slowly get habituated with the new way of learning and feel comfortable with the online classes just like the traditional ones. This will gradually help the educators in brand building as well as strengthening the system of online education by making it more impactful. **d**
