

Alternatively, if you want to delete characters or spaces to the left hand side of the cursor, then place the cursor accordingly and hit “X”.

Deleting a word or line from the text

Place the cursor at the beginning of the word you want to delete and enter the command <dw>. This will remove the word and the space that it had occupied. To eliminate part of a word, place the cursor on the right side of the part which you want to save. Enter the command <dw> and this will delete the rest of the word. For removing a line, place the cursor anywhere on the line, and hit the command <dd>. This will delete the line as well as the space that it had occupied.

How to append text in Vi Text Editor?

There are times while preparing a text file wherein you want to simply enter a text that you have missed out by mistake. Appending a text is an easy task wherein you have to move to the Command Mode of the text editor and simply enter the line number in which you want to add a text followed by “G”.

If you wish to add something to the 6th line of the text, you simply move to the Command Mode and hit “6G”. This will take the cursor to the end of this line from, and you can move to the Insert Mode by hitting “A”. To edit the last line of the text file, you have to simply hit “G” in the Command Mode of the text.

Inserting a line between two lines

You can also enter line in-between lines of the text. If you want to enter a line above the current line, take the cursor to the left- hand corner of that line and hit the command “O”. This will move the current line below its former occupied space, thus, creating a space above it. If you want to enter a line below the current line, take the cursor to the left- hand corner of that line and hit the command “o”. This will move the current line above its former occupied space, thus, creating a space below it.
