

PDF document. Hence, this is a useful trick for all the forms and emails you wish to keep a copy of.

- **Windows Key and Print Screen:** We have already talked about the print screen technique; hence, this is just an addition to the existing lot. Pressing the Windows key along with the print screen option gives you a screenshot.
- **Windows Key and Shift S:** The Windows key and shift S also works effectively to save the open screen or window as it is.
- **Alt button and Print Screen:** Here is another way to take the screenshot. Press the alt key and the print screen option together, and you will have your screenshot!
- **Windows key and volume down:** This is the final method to take a screenshot on your PC, powered by Windows. Press the Windows key and the volume down button to take and save a screenshot of the open window on your screen.

2) Mac

Mac, by Apple, is quite the face of sophistication. Hence, whatever they do, they do with finesse. This stands true for taking screenshots too! There is consistency in the three methods of taking a screenshot that can be expected only from Apple. They are pioneers who outdo themselves, and a small detail like taking a simple screenshot is proof that nothing escapes their sense of perfection.

- **Shift key and command key and 3:** This is the most commonly practised method of taking a screenshot among Mac users.
- **Shift key and command key and 4:** Pressing the shift key, the command key, and 4 together will also give you a screenshot on Apple Macbook.
- **Shift key and command key and 4 and space bar:** Once again, the shift and the command keys remain the common elements in taking a screenshot. Nonetheless, this is a method that requires one extra key – the space bar. Clicking on the shift key, the command key, the space bar, and 4 together will give you a helpful, crisp screenshot of the window that is open on your computer screen.
