

button at the same time. Once you perform this step, you will see that the light bar at the top of the controller is blinking, which is an indicator that the controller is searching for a device with which it can pair up.

Steps for connecting your PS4/ Xbox One controller with an iOS phone

- First, open your iPhone's "Settings" application and click on the "Bluetooth" option present at the top of the Settings menu list. To switch it on, just flip the Bluetooth toggle to green. If your PS4/ Xbox One controller is ready to pair up, you will find the controller in the list of devices that are available and ready for pairing with the device, named as "Xbox One Wireless Controller" or "PS DUALSHOCK 4 Controller".

- Tap to select the option that applies to you. Once your iPhone is successfully paired with a PS4 Controller, a pink colour light will light the light bar that is present at the top of the DualShock 4 controller. If your iPhone is paired with the Xbox controller, the backlit middle button controller will not blink anymore and stay illuminated. This indicates that your iPhone has successfully connected with either the PS4 or Xbox One controller.

Steps for connecting your PS4/ Xbox One controller with an Android phone

- Connecting Xbox/ PS4 Bluetooth controllers to Android phones that operate on older Android versions, that have come before Android 10, is now possible. But, the latest updates in Android versions by Google
