

- Under the “My Devices” option of the Bluetooth, you can see the “Xbox Wireless Controller” or “DualShock 4 Wireless Controller.” On the right side of this option, you will find the small letter “i” encircled in the colour blue. Simply press the small “i” tab.
- From the menu that will pop-up as a result of the above action, press “Disconnect” and the controller shall stop working right away.

It is always recommended to unpair the PS4/ Xbox One controller when not in use, to save your phone from getting connected with the controller automatically when your phone’s and controller’s Bluetooth are on at the same time. Hence, to unpair the controllers, you have to perform all the above steps, except at the end instead of pressing “Disconnect”, press the “Forget This Device” option.

Steps to disconnect PS4/ Xbox One controller from your Android phone

The steps are more or less the same as that on the iPhone.

- To disconnect the controller, start by opening the Bluetooth option in the “Settings” menu of your Android phone. In the list of “Connected Device” under “Bluetooth”, hold down on the PS4/ Xbox One Controller, and then select “Disconnect” option followed by “Forget Device” option to completely unpair the controller from your Android phone.

We hope that this all-inclusive article has outfitted correct information on how to connect PS4/ Xbox One controller with an iOS phone and Android
