

- **Data Analytics Usage**

The advantages of the usage of artificial intelligence and machine learning on email archives are unlimited. Natural language processing algorithms can be used to chart data patterns from random email conversations and draw conclusions regarding the nature of email conversations in a company.

Looking into the communication patterns of employees allows high-level management to gauge how high their morale is. These algorithms can also be used to stem arguments and stop the infringements of the ethics code of the company. These high-level machine learning techniques can be used for a number of other productivity-increasing activities.

- **Data Insights**

All departments of a company can use their respective email archives to gain insights into the working culture prevalent at any point in time. Data analytics toolboxes and natural language processing algorithms may be used for activities such as keyword detection and sentiment analysis to understand the positive and negative aspects of the work currently underway, and to make amends accordingly.

Managers regularly obtain reports based on archive analysis of emails and take a number of administrative decisions based on the results of the same.

Benefits of Archiving Emails

- **Preventing Corruption of Data**

Data stored long enough can be prone to corruption. Corrupted data is often impossible to retrieve and can lead to the loss of important and essential information, for both the individual employee and his company.

It is hence imperative that the company maintain a backup of data so that it can be restored readily in case primary data is corrupted. Email data can be conveniently stored in email archives. Email archiving contains various features explicitly meant to prevent email data from being corrupted, and can hence be a long term solution against data corruption.

- **Cost Reduction**

A reduction in costs is among the primary goals of any profit-seeking organization. Companies covet any opportunity to reduce costs, and minimal reduction in operating costs can lead to a windfall at the bottom line.

The storage used for archiving emails is generally low-level storage infra-
