

structure, which is hence also very economical. At the same time, the live server used to host emails costs a lot more. Therefore, regularly archiving emails can lead to significant cost reductions for companies.

Larger companies can particularly profit from buying cheap storage for hosting email archives en masse. With data storage growing exponentially every year, the cost reductions to be made from email archiving are also exponential.

- **Time-Saving**

One of the main advantages of email archiving is that it is an automatic process. In a corporate environment, employees spend hours and hours in the end, writing emails or responding to them.

This significantly reduces the productivity of the employee. The productivity of the employee is directly attached to the productivity of the firm, and the more time spent operating one's email, the less time is spent doing what your firm wants of you.

Email archiving, being an automated process, saves a lot of time for every employee and also leads to an increase in productivity. Had archiving been a completely manual process; like, for example, saving word documents, data losses would be significantly greater.

- **Tamper Proof**

Most email archiving systems are completely tamper-proof. Unless exclusively customized for this, no employee at any level of the management
