

This leads people to using dark mode. It can also be noted that using dark mode on any device tends to save the battery of the same. Thus, the dark mode is mostly preferred by users, and in this article, we shall see how to enable dark mode on various platforms like PC, Mac, Android, iOS, the web browser, WhatsApp, Instagram, Facebook as well as Gmail.

Switching on the dark mode in windows 10

In October 2018, Microsoft released an update for Windows 10 that helped expand their dark mode to even the file explorer and other native storage areas such as C Drive and others. This means that the screen gets darker than normally enabling dark mode. We shall see how to enable the dark mode in windows 10 for even the file explorer:

- Step 1: Navigate to the Windows 10 settings page. You can use the Windows search bar at the bottom left or use the gear icon found in the Start menu.
- Step 2: Walk your cursor to Personalization, which can be the icon of a monitor with a paintbrush over it.
- Step 3: Once the window pops up, choose colors which can be found on the left side panel
- Step 4: Once the page opens up, navigate to roughly the centre of the page where you can find the section that says, Choose your default windows mode. You must choose the option. Choose Your Color, and eventually choose the option “dark” from the dropdown.
