

Switching on the dark mode in your web browser (Google Chrome)

Unlike other popular and less popular browsers such as Mozilla Firefox and Microsoft Edge, Google Chrome does not come with an inbuilt dark mode option. Nonetheless, enabling dark mode or night mode in Google Chrome is not such a hassle. It can be done with the help of a few clicks. We shall see how to do the same. In Chrome 74, Google Chrome gained an inbuilt dark mode for Windows 10, and in Chrome 73 for Mac OS. You can also get amazing dark themes, along with user-created themes that can be installed easily from the Google Chrome Web Store. Unlike other browsers, Google Chrome goes on a limb and provides editor-picked dark modes as well. This enables dark mode for other versions of windows as well such as windows 7, Chrome OS as well as Linux OS.

Later on, Google Chrome rolled out official Chrome Browser Themes, which includes a sleek “Just black” dark mode. This peaked a lot of interest and something that you may be interested in trying.

Other popular modes that can be found in the Chrome Web Store fulfil the sleek black or dark mode in the browser as well. One such popular mode is the “Morpheon Dark,” which is the most popular dark mode theme that can be found on the Google Chrome Web Store.

Morpheon Dark is one of the best dark modes in the web store. It can turn the tab bar, New Page tab bar, toolbar as well as the title bar on the top black and give it a sleek, classy look. Overall, your browser takes the perfect dark mode appearance with Morpheon Dark. But this is the limit to Chrome’s dark mode. For example, you can change the context menu, the settings tab, and other similar pages dark. You can also easily change
