

or reset to the default by navigating to the menu > Settings > Appearance > Themes > Reset to Default.

You can also install a dark mode extension for your Chrome browser. One of the best dark-mode extensions found on the internet is the dark reader extension, which is found on the Google Chrome Web Store. While there are a bunch of Google Chrome dark mode extensions, we believe that the “Dark reader” extension is the best of the lot. The Dark Reader extension adds the dark mode to virtually every website you visit, without toggling it on and off for each and every site. You can even control the dark mode brightness and other features by toggling on the dark reader extension icon on the top right side of your browser.

You can also add particular sites to NOT open with dark mode by setting it in the Dark Reader extension. This is done when dark mode affects the general appearance and functioning of a website. While this is particularly useful, Dark reader cannot be extended to Google Chrome extensions and settings pages, which will always remain in the native palette, white and blue.

Switching on the dark mode in Instagram

It can finally be said that the benefits of dark mode have reached famous social media app developers as well. We have seen social media behemoths such as Instagram, Facebook, Twitter, and Facebook messenger avail the dark mode options in their apps and browser sites. If you are running the latest OS in iOS (iOS 13) or Android (Android 10), then Instagram will automatically get the dark mode based on the system-wide toggle of dark mode. Some of the ways of turning the dark mode on Instagram, if you do have the above are:

1. iOS 13

- Step One: Open your settings application on your device
- Step Two: Navigate to “Display and Brightness”
- Step Three: Tap on the ‘Dark’ option available to change your theme
- Step Four: Open Instagram to verify the change

2. Android 10

- Step One: Open your settings application on your device
- Step Two: Find the “Display” option and click on the same.
- Step Three: Click “Dark Theme” to toggle on the same across the entire system
- Step Four: Open Instagram to verify the change to your app
