

With this dark mode, Instagram's overall layout not only looks aesthetic but is easier on the eyes for those who are addicted to the app and spend a large amount of time on the same.

Switching on the dark mode in iOS

iOS 11 and above have come with in-built dark mode ability. It not only looks amazing on your device but gives an easier gaze upon the eyes and ensures smooth functionality and overall user experience. To turn on the dark mode in iOS, you need to perform the following steps:

- Step One: Go to the Settings application on your phone.
- Step Two: Navigate to the Display and Brightness Section on the same.
- Step Three: On the top, you can see two options, "light" and "dark." Click on the "dark" option to toggle on system-wide dark mode on your device.
- Step Four: You can also choose "Automatic" based on the time of your day, to switch or alter between the light and dark modes on your device.

Switching on Dark Mode in Facebook

Upon much deliberation, teasing, and reconsideration, Facebook has finally decided to launch the dark mode in their apps. It was first rolled out on WhatsApp, before being added to the Facebook lite app. Soon, it was added to the Facebook app as well. Here are the following steps to get dark mode on the app.

- Step One: Login or create an account. Once you have verified your credentials, you will be able to log in to the home page or your timeline.
- Step Two: Navigate to the right of the screen to find the Settings option on your app. You can scroll down from there and find the dark mode, which can be toggled on to access dark mode on your application.
- Step three: exit the settings and navigate to the different sections of the app to ensure that the dark mode has been successfully activated across your devices.

Switching on Dark Mode in Gmail

Dark mode has become all-pervading. There is not a mainstream application that does not use dark mode as one of their mainstream themes. The latest addition to the dark mode family is Gmail. To activate dark mode in Gmail, perform the following steps:

- Step One: First, go to Gmail.com and enter your credentials if you are already not logged in.
