

Whether you are a new or a seasoned user, there are many hidden features that you can use to upgrade your video chatting experience.

Here are some tricks to help you use Zoom like a pro:

1. Improve your background

When you are in Zoom calls, you can teleport yourself to exotic locations by customizing the background. It is a common practice these days. To change the background in Zoom's desktop or mobile app you need to go to Settings> Virtual background and upload or select the image that you wish to have as your background. It is imperative that your device has all the configuration requirements for this purpose.

2. Mute audio and turn off camera by default

Practices like muting audios and turning off cameras after engaging in the meeting are obsolete. If it is an official meeting, you need to maintain some dignity. You will not want your colleagues to see your bed head or hear your cat screeching. All you need to do is go to Settings and choose Audio>Mute microphone while joining a meeting. Likewise, go to Settings and select Video>Turn off my video while entering a meeting.

3. Use spacebar to unmute and mute

It looks odd if you scramble to click the microphone button. Make use of the spacebar. Hold it for a while to mute and unmute your mic from the keyboard. It is more convenient.
