

Modern 2.1 channel speakers use Bluetooth 5.0 connectivity to lower the burden of cable management. As a result, you can quickly spread the tweeters at the maximum distance from each other. To get the best quality of surround sound. Even the 2.1 channel will work if it supports Dolby transmission. You need to make sure you set them up correctly, and the calibration is according to the manual.

Most of the companies are now making 2.0 channel soundbars that are more expensive than 2.1 channels as a single component house everything from two tweeters to a subwoofer and the controls. One of the biggest examples of these types of soundbar Lg soundbars with just two housing components will fill your room with the sound that you cannot imagine, and you will hear the sound coming from your back, from above and down. Such a tight dimension but still delivers amazing audio playback.

5.1 Channel

5.1 is not an ideal speaker system for everyone. Be it the issue with space or the price, and most people prefer going with 2.1 channels for watching movies and playing games. But if you are a true audiophile and loves to hear the sound that tingles the hair on your arms. You need to get yourself a 5.1 channel system.

In this configuration, we get 5 tweeters that you can place anywhere in the room. The basic outline of setting these 5 tweeters is to put each one of them in one corner of your room and keep the remaining close to your screen for the full surround sound immersion. If you are looking for a deal to get the best of the 5.1 channel system, you can get it around ₹20,000. Which is not a lot if you consider Bose and Sony are selling their noise-cancelling headphones at almost double this price.

With 5 tweeters you get to hear sound from all 4 directions along with 1 subwoofer to deliver the thumping sound which makes the movie watching and music listening experience amazing. The 5.1 channel comes as a proper home theatre system. You might get surround sound from 2.1 and even from 2.0, but the real experience of listening to surround sound comes from 5.1 channel speakers only.

How to calibrate your speaker system?

Now let's look at how we calibrate these speaker systems one by one.

2.0 Channel

We do believe that content is the king, and with the perfect hardware, you
