

7. A lot of people get confused when we talk about the speaker crossover, but it is an A/V receiver setting. For this, your receiver will stop sending base signals to your speakers and will only send it to the subwoofer. As a result, your speakers will give you crisp dialogue along with highs and lows while your subwoofer will provide you with a deep base.

Conclusion

We know that no two rooms even in the same apartment can be of the same dimensions, so we didn't provide you with the exact distance of where you need to put the speakers and the subwoofers. But, we can suggest techniques which you can follow to get the optimal results and that we have done in this article.

All three of these speaker systems are in great demand and people use them for smart TVs, home theatres, and even for gaming rigs. If you want to have the best of both the world, meaning you need to save up the hassle of setting up 5 speakers that could potentially take up all your space, while still being able to experience the true surround sound experience. We suggest you should go with a 2.1 channel speaker system because they do have great speakers and for the base, and you will get a subwoofer also.

It is better to decide where you want to set up the speakers and the subwoofer even before making the purchase. You can get the dimensions of the speaker system that you are looking for online, so it will be easier for you to know if the system will fit in your room or not. One more thing we would like to suggest before we finish this article is that you listen to speakers before swiping the card and buying them. We hope you have a fantastic time with your speakers, but to make them worthy of your every penny, you must calibrate them.
