

More than 140 banks are live on UPI. As of March 2019, the monthly volume of transactions is nearly 750 million with a value of Rs.1.3 trillion.

The NPCI website lists out the banks that facilitate payments through UPI. Banks have been divided into two categories, Payment Service Providers (PSPs) and Issuers. PSPs are the banks that have an application to facilitate payments through UPI, and Issuers are the banks that use third-party apps to handle their UPI payments.

Many third-party apps have made payments through UPI even simpler. Using these third-party apps, you do not have to remember the beneficiary account number, IFSC code and the account type. Just type in the phone number, and send money directly to their bank account. Google Pay, PhonePe and Paytm are three of the most used third-party apps.

Advantages of UPI

UPI makes the process of sending and receiving money more accessible than other traditional online payment methods like NEFT, or RTGS. Also, the use of UPI for funds transfer makes the transactions much safer than conventional methods. UPI avoids the use of personal details for the transaction, thus ensuring that the personal information cannot be misused. With integrated security features, the chances of fraud have been minimized. Also, it is available 24/*7. This allows the users to make transactions at their convenience.

Using Google Pay to transfer money through UPI

Google Pay (formerly known as Tez) is an online app that allows the transfer of money over UPI.

Before setting up a Google Pay account, you have to ensure that

your Android device is running on Android KitKat 4.0 or higher. Users who have iOS devices need to update their devices to at least iOS 8.2 or higher. Also, remember to never disclose your GPay pin to anyone.

Setting Up Google Pay Account

- Step-1: Download the Google Pay app. Once downloaded, it will ask you to add a mobile number. Add the mobile number registered with the
