

Using PhonePe to Transfer Money through UPI

PhonePe is an Indian mobile payment platform that was founded in the year 2015. It was the first app that was built on UPI and went live in the year 2016. PhonePe not only helps in the transfer of money from one bank account to another but can also be used to pay utility bills, make recharges, buy gold, etc. There is no need to recharge any wallet, as money can directly be debited from the user's bank account. UPI allows 24*7 transactions and is safer than all other forms of internet banking. PhonePe is available for both Android and iOS users.

Registering on the App

- Step-1: Download the application from Google Play store. iOS users can download it from the App store.
- Step-2: Click on “Let’s Get Started” after reading the initial instructions that appear.
- Step-3: The application will ask you for your details, like name, email address, etc. Here you would also have to choose your 4-digit PIN.
- Step-4: Next is choosing a Virtual Payments Address (VPA) for your account. Click on “Create a new VPA” to select the VPA.
- Step-5: Choose your bank from the list that appears, and the app will try to detect your bank account details automatically. Make sure that the phone number that you have previously entered matches the one registered with the bank.

Adding Bank Account to your PhonePe Account

- Step-1: Open the PhonePe app. Select the “Bank Account” tab from the menu that appears.
- Step-2: Click on the “Add New Bank Account” option which will show a list of all banks who allow money transfer through UPI.
- Step-3: From the list, choose your bank, after which Phonepe will auto-detect the account details from your mobile number.
- Step-4: After the account has been detected, PhonePe will now link the account to the app.
