

the tag. On accepting the tag the light will turn green automatically. In case you are blacklisted or the scanner doesn't read the tag then users must pay in cash to pass through the scanner. Although some issues remain, the technology is a significant improvement from the stop and pay traditional method.

FastTag recharges can be done through internet banking, RTGS, NEFT, UPI, debit card, credit card, cheque, cash, etc. Cash and Cheque mode of recharge applicable at the point of sales (POS) locations only.

If the users don't maintain an adequate amount in the FastTag wallet, users then get blacklisted from the central system. Then users won't be allowed to use this tag further and would be asked to pay the toll amounts in cash. Users can connect with customer care for the specific tag issuer to remove them from blacklisted after paying the due amount.

FastTag point of Sale app has added features to add manage distribution partners in empowering consumers to use them for petrol pumps. Newer version applications allow you to recharge using any selected bank or payment apps. Though in the beginning, consumers had the restriction to use the same bank they used to purchase the FastTag.

FastTag uses a specific RFID passive technology to charge consumers directly from the prepaid amount or the linked account. FastTags balances are also non-transferable. So, once it is attached to a particular vehicle, users are not allowed to apply this tag to any other vehicle.

How to check your FastTag Balance?

You can check the FastTag balance through a mobile app, web portal, missed call, or even SMS. All organisations such as NHAI, Banks, Paytm, Amazon, etc provide the facility with toll-free numbers.

NHAI has a special 'Missed Call Alert facility' for all consumers registered under their wallet. Consumers can give a missed call to +91-8884333331 and get all the tag details as well as the balance via SMS. This facility is available for 24 x 7 while users with wallets from other banks can't use this service for now.

In case there is more than one vehicle linked to one NHAI's wallet, then the SMS shows the detail of all FastTags and their respective balance. Users are also notified of low balance in their FastTags balance with enticing offers.

My FastTag App is a government mobile application available on both Android and iPhone users. FastTag was developed with the main
