

devices such as webcams, or mobile phones is the need of the hour. The Zoom video conferencing app even broke records by being the most downloaded app in April 2020, with more than 131 million downloads.

These few examples clearly show the importance of video conferences in the present scenario as well as the future.

Why Do You Need A Webcam?

Most of you, whether you're a student or a professional worker, have to attend meetings, classes, or just want to interact with your family and friends via video conferences more than you ever did before. The device that makes it possible is a 'webcam.' But, you must have also noticed how terrible the in-built video quality in a webcam usually is. Sometimes it gets pixelated, blurry, or even stops working altogether.

A Few Solutions To The Issue

To have a decent video conference, you must upgrade your webcam device. There are some simple ways to do that.

- The most popular choice is to buy a high-quality USB webcam.
- The second one is to use your old mobile phone as your webcam.

The issue with the former option is that due to the rapid and excessive demand of the USB webcam, the supply was overwhelmed, and now there are hardly any good quality USB webcam left in the market. The second option is a bit more complicated, and although the quality of the video will improve, the effort needed outweighs the result gained.

So what's the most viable solution? How can you step up your video conference game? An effective way is to use your DSLR as your webcam and have the best video quality that would surely catch an eye.

Using DSLR as a Webcam

Based on what type of camera and computer you own, it could be a piece of cake, perhaps as easy as inserting a Pendrive. The more upgraded your systems are, the better are your chances of nailing the process.

Requirements To Use Your DSLR As A Webcam

Now that you know about the solutions to the issue, let's understand a few requirements that you need to turn your DSLR into a webcam.

- A clean HDMI output is an essential requirement. Therefore, ensure that your camera can produce a clean HDMI signal.
