- Most DSLRs come with inbuilt batteries which are chargeable. But, this won't be very useful when you are trying to convert your camera into a webcam as it can switch off due to fast drainage of battery. Make sure that you have an A/C wall adapter for your DSLR.
- Cameras have an automatic 'power-off' timer to save battery. Make sure to turn that off as you will need your DSLR-cum-Webcam to perform without any limitations.
- When you're using your upgraded camera webcam, you will need continuous streaming. This means that your DSLR will be performing heavy work and sometimes without any break, based on your meeting schedule. Therefore, it is crucial to ensure that your DSLR is capable of shielding itself from overheating.

Here are three ways in which you can use your DSLR as a webcam -

Free Utility Software From Manufacturer

Some prominent DSLRs like Canon have already launched a free utility software that will allow their customers to use their DSLR as a webcam in a few clicks.

- First, you need to install the software.
- Connect your camera to your computer using a standard USB (which should be available with your DSLR itself).
- Voila! Your Canon webcam is ready.
