

Using A Webcam App For Mac

If you have a Nikon DSLR, there is a similar app like 'SparkoCam' called 'Ecam Live' for Mac users. But, if you have a DSLR of other brands. Follow these steps to use your camera as a webcam on your Mac.

- First, you will need to install two software - 'Camera Live' and 'CamTwist' on your Mac computer.
- Connect your camera to the system via a USB cable.
- Now, open 'Camera Live', choose your device, and wait for it to show 'Ready.'
- The next step is to open 'CamTwist'.
- Then select the option 'Syphon' as your video source. It will enable you to receive the video feed from your digital camera.
- Then select the 'Camera Live' option as the 'Syphon Server'.
- Now your camera should be visible in 'CamTwist'. Now choose any video conferencing apps such as Zoom or Skype and choose 'CamTwist' as the video feed and Voila! Your Mac computer is ready with a professional quality webcam.

Best Alternative - Using DSLR With HDMI

This option works best for DSLRs that can produce a clean HDMI Signal. In simpler words, this means that your image doesn't have overlays like exposure details or focus tools. You will require an HDMI cable, which you can put into your to-be webcam.

An HDMI cable allows you to get a live image from your camera, which is quintessential for video conferences. There is a probability that your camera will only support micro HDMI unless it's a new edition. Therefore, based on your DSLR, you can buy either a full-length Micro HDMI cable or an adapter that will enable you to convert the giant HDMI plug into a micro HDMI.

You will also need the other device called a USB capture cards. They cost around \$100 or ₹7,000 and are used to convert the Camera's HDMI signal (output) into a USB signal (input). This hardware allows you to use your DSLR as a
