

How to take a break from electronics

Learn how to efficiently step away from electronics for a bit and recharge

Introduction

With technology invading every portion of our lives, the number of people who depend on computers or smartphones for almost everything has increased drastically. Although millennials are often blamed to be the ones more prone to using technology, the oldies are not far behind! Computers, and computer-driven devices, have managed to mesmerise people of all ages, thus giving rise to a new category of hobbies.
