

Techies and the tech-savvy lot are typically found glued to their electronics, trying to explore the digital world. They are always looking for exciting new things to do on their computers. In many cases, they are also found developing newer and better methods to do their regular work. However, although the digital media is of much use in the twenty-first century, and imagining a day without the internet feels like a punishment, it is important to take a break from your electronics. They have plenty of advantages to their name, but they also have disadvantages, the effects of which can be minimised if you can take a break once in a while.

Why the internet is not as good as it seems: a word of caution for the tech-savvy

In the previous section, we have discussed why you need a break from your electronics and the internet. Now, we shall talk about the things that you must refrain from indulging when you are browsing the internet. These points are mentioned to help you understand that the Internet is not always a happy place and the best ways to save yourself from these things is to take a break. The internet is a cauldron for all kinds of people. If the innocent ones are not cautious enough, they can easily be trapped in the activities of the malicious ones.

- 1. Be cautious about cybercriminals:** The internet is a vast space that houses all kinds of people. Needless to say, there is an abundance of criminals who are also a part of it. They can cause a lot of harm to you and to your property and belongings. To save yourself from the hands of such goons, you must be extra alert while using the internet, even when you do so. Different countries across the world regularly
