

propagate advisories that warn civilians against cybercrimes. Those must be taken seriously and followed religiously.

2. **Stay away from the deep web and the dark web:** As we have already mentioned, the internet is a massive place. It is like an iceberg, and all we see is just its tip. Beneath that is the dark world, known as the deep web and the dark web. Most people are unaware of this part of the internet and can sometimes fall prey to the extremely negative activities that originate here. Therefore, it is advised to not tread into these dark alleys of the virtual world as it can leave behind huge mental stress for the user. Sometimes, even as you are on the 'brighter' side of the internet, you can be lured into these parts by some malicious people. Make sure to stay alert in such cases.

3. **Do not misuse the internet and your knowledge:** The internet can be vastly misused if enough care is not taken. There is a fine line that separates good use and bad use of the Internet. Tech-savvy people must not stray too far away from this line. Many techies are also found using their knowledge for negative things. Laws regarding cyber crimes are getting stricter by the day. Hence, it is advised that they refrain from misusing their knowledge, and instead put it to use for the benefit of the common mass.

Why do you need a break from your electronics?

Your electronics are very dear to you and we understand that. Nevertheless, they can be a cause of a number of unwelcome consequences that can affect your life in the real world. Hence, being too immersed in the
