

Example 2: Recording Gameplay Using Windows 10 Game Bar

- **Step - 1:** Here, you first have to open the game which you want to record, once you are in the game press Windows buttons along with G (⊞+ G).
- **Step - 2:** When you press these two buttons together, it opens up the game bar at the bottom of your screen. You might need to select yes, verify this game, and record it.
- **Step - 3:** Now, click on the button from the game bar to start recording your gameplay.
- **Step - 4:** To pause the recording of your game, you need to click on (⏸) and the video will be saved in the capture folder of your Windows, from where you can access it and upload it on multiple video sharing platforms.

Different Tools to Record Your Gameplay

There are several tools and software that you can use actually to record gameplay. We have listed a few great ones below.

Plays.TV

If you are new and don't know anything about recording gameplay, it's better to go with software that almost runs on autopilot. All you need to do is install the software and make a free account on it. Once you are done with
