

these two steps, Plays.TV will start and record videos in the background when you are playing games.

It is a default set to record video at 720p for 10GB of space, but you can easily tweak it according to your needs. Also, when you are done playing the game, it will show you a 30 seconds highlight of your recording, which you can then upload on Plays.TV community to get some viewers, or you can upload it straight to your YouTube channel.

Bandicam

When you have a massive gaming rig that can support 4k gaming at high FPS, you should check out Bandicam, as it lets you record gameplay at a 4k resolution natively. Thus, you won't be losing any quality of your gameplay. Keep in mind when you are recording a video in 4k, you can quickly run out of internal storage as 4k video is too heavy. So, we recommend you to have a separate hard drive just for the gameplay recording.

Don't worry, and it is not necessary to have recorded a video in 4k; you can lower the resolution and can control the FPS of the recording. When you are done with your recording, you can save it and upload it on any of your social media, video sharing platforms to get viewers.

Nvidia GeForce Experience

If you have installed Nvidia graphics on your computer, then you need to have this software. It keeps your graphic drivers up to date while tweaking the graphic options based on the Nvidia graphics, which you have, to give optimal gaming experience. In addition to this, this software can be used to record your gameplays. It can record games in the same resolution as of your display. As a result, you can record in 4k without paying a single penny.

Open Broadcaster Software (OBS)

Every other gamer that you see on YouTube is using OBS to record or stream their gameplay. It's a simple software that is known for its easy to understand UI. There's a catch for using OBS, and there is no way you can quickly record a video and save it.

It requires you to have some extra knowledge about the software and the hotkeys. On the other hand, when you get familiar with its working, you will see how better it is from any other game-recording software out there.
