

- **Read books:** There are plenty of good books written by great engineers, programmers, and developers. Books are a great way of learning new tricks about programming language or technology. They provide extensive knowledge about the subject, thus making you proficient in a specific technology. You can get these great programming books from the library or online shopping websites.
- **Watch Recorded Conferences Online:** Listening to conferences is another way of learning new things. There are many conference talks given by industry leaders available on the internet. You can browse thousands of videos online and learn about what those people have said about programming.
- **Get Your Code Reviewed:** Review and feedback are an excellent way to improve skills and learn new things. You should always voluntarily get your code reviewed and take the feedback in a positive way. It might seem tough initially, but consequently, you will find that it has helped in improving your skills. If you do not find anyone who can review your code, you can work on an open-source project and ask people online to review the code. It will help you in writing code in a better way and in providing the best solutions.
- **Keep a Journal:** Maintaining a journal is another good habit that can help you in remembering things you have learned over time. You can record the challenges that you faced and the learning outcomes that you obtained. You can record things such as occasional observations, daily workload, and things learned in the past during software development.
- **Read the Source Codes of Real-world Projects:** You can read some of the real-world project codes available through open-source. Reading such high-quality codes can help you visualise problems and solutions from different perspectives and make you think about the different ways of solving problems. There are many sources from where you can get open-source codes for some of the world's greatest projects.

Go to the Library and Grab Some Books
