

These sources include GitHub, Bitbucket, etc.

- **Listen to Podcasts:** There are many good quality podcasts available on the internet related to software development. This is another way of learning new things in programming. You can listen to these podcasts any time as per your convenience. Software Engineering Radio is an excellent podcast related to software development that you can listen to.
- **Work on Side Projects:** Working on side projects is another way of improving developer skills and becoming a better developer. The side project can be simple or complex, small or big, open-source, or in your workplace. You can also open-source your code and expand your portfolio to a broader audience. Doing side projects will help you encounter new and different problems. Solving them will be great fun and a learning experience for you.
- **Read Postmortems:** This is another exciting way to enhance your skills to be a better developer. There are many stories on the internet or in books related to software projects. These stories are very interesting and enlightening. You can learn a lot from them. Coders at Work is one such great read.
- **Join the Cross-team Community at Work:** You can also join a cross-team community at your workplace. The members of these communities meet regularly for discussions. For example, you can make a community in your office, consisting of people working on different technologies and using different languages. You can discuss industry developments stuff or problems you encounter in your projects.
- **Find a Mentor:** You can pick someone who has more experience than you as your mentor. Working together with such people will surely help you in learning new things. Also, you can ask for advice from them. The mentor can be someone from your workplace or can be a virtual mentor. You can pick someone from social media websites such as LinkedIn.

Cross Community Meet-ups
