

server-side as well as the client-side, to add interactive functionality to websites and applications.

2. Libraries

A library is a collection of pre-written JavaScript (JS) functions that makes the development of JS-based apps a breeze.

- **JQuery:** JQuery is touted as write-less, do-more JS library. The purpose of JQuery is to simplify the process of working with JS. JQuery wraps reusable lines of code into a method, which can be called with a single line of code. It is an easy-to-use API, which is compatible with a multitude of browsers. There are many libraries available for various purposes, such as D3.js, Chart.js, and more.

3. Front-end or CSS frameworks

These frameworks extend the capabilities of CSS by providing a good starting point for new projects as well as saving a lot of time required for the styling. Bootstrap, Material Design, and Foundation are some of the popular frameworks.

4. JavaScript frameworks

Once you master the building blocks of front-end development, take the next step, and start learning software frameworks for upscaling your skillset. The software framework allows you to extend the capabilities of the base language and also provides a standard way to build and deploy applications.

JS framework makes working with JS easier and smoother. There are plenty of JS frameworks, but we will go through some of the widely used and popular frameworks. We recommend learning multiple frameworks to maintain a competitive advantage in the job market.

- **Angular:** It is a well-recognised, efficient, and open-source JS framework from Google used for developing Single Page Applications (SPA).
- **ReactJS:** It is one of the most amazing creations of Facebook, that has turned quite a few heads in no time, since its inception. ReactJS is gaining popularity because of its interactive and dynamic UI creation feature. Learn ReactJs and increase your chances of getting selected for some top-paying jobs, where there is a considerable demand for it.
