language, you'll be able to switch to any other language easily. For people who are coding for the first time, it might be a bit difficult for them, as they will have to get acquainted with basic programming theory.

It is highly recommended that developers, at any stage, should interact and engage with the huge community out there. There are multiple platforms to do so. Reddit has various popular subreddits where developers share experiences and tips every day. One should also communicate with fellow back-end developers on other social networking platforms like Twitter, Instagram, etc.

There are certain websites like www.codeproject.com, which host numerous developers who share their experiences and codes regularly. Apart from this, developers can also join newsletters on platforms like Substack, Medium, etc. or Telegram/ Slack channels.

Building a personal brand is very important. A developer must maintain a good portfolio, whether as a personal website or hosted on platforms like Github. It is also favourable to regularly write blog posts regarding your experiences, new tricks, thought process, etc.

Additional learning resources

There are thousands of channels that you can choose. Each of them has different pricing, styles of teaching, and content. Here we will list out important courses and tutorials that are preferred by many developers:
