Machine Learning mastery

If you are looking for a resource worth following all the time, you can rely on Machine Learning Mastery. This website is owned by Jason Brownlee, who has a PhD in AI. He focuses on explaining ML algorithms with small projects and their application in the real world. This blog is aimed at absolute amateurs and it is quite good at what it does.

Kaggle

Being an AI or ML developer or enthusiast, you might be acquainted with Kaggle. Kaggle is the largest data science community focusing on AI and ML problems. It has a variety of projects and competitions for all ML and AI enthusiasts. These competitions and little projects will also help you build a good portfolio of projects over time.

You will find the links to each of these resources explained and some additional ones at the end in the Additional Learning Resources section.

Understand algorithms

Algorithms are an essential aspect of programming. If you are into AI model development, you are undoubtedly aware of the various programming concepts like algorithms. Having a right prediction or learning algorithm handy is always a great start to building your AI, but more than that, understanding whether that algorithm is perfect for your problem is the greater deed that you need to perform. You cannot just pick an algorithm and go ahead with the problem. Therefore, make sure you understand the algorithms and perform the operations as you want and if you want it.

Now, that you know the basics of starting with the AI model building, you should move towards understanding AI at a deeper level so that you can build some fantastic models. Remember that you must first master the learning curve and then move towards algorithmic and programming understanding of AI and its syntaxes.

The reason being, if you do not know what clustering and classification mean, you will not know when to use them. If you do not know when to use probability and why should you use variance, you cannot understand their application. Therefore, win the curve and reach the next level of the
