

understanding of the business procedures to define problems, corrective measures, and growth factors. Business acumen will help data scientists select the right model and algorithm for data analysis to get better insights and results.

Experience

A data science profile comprises multiple skills and experience that generally can take years of education training and working experience. Individuals must be self-starters, have definitive evaluation capabilities, and test their skills on online methods for gradually applying them to complex tasks for a broader approach. Modern data scientists work with hundreds of analytical tools, techniques, and methods to perform their tasks. Individuals must test their skills and preparation for building algorithms and models to enhance their performance regularly.

Experience can be a huge factor in earning prospects. As one of the defining factors for a career, data scientists must match their skills with the best industry practice and knowledge to improve their skills to access more work opportunities. Senior profiles associated with this field may have a designation of Senior Data Scientist, Data Science Manager, Data Science Director. With experience, you can earn high salaries for data scientists that can go up to as high as \$150,000 on average.

Certifications

A career in Data science is a heavily skill-oriented profession. Working individuals can leverage their experience and combine their learning curve to get more opportunities in the industry. Individuals with the right skills can also opt for international certification and choose the data scientists profile to add more prospects. Though data science is a multidisciplinary field, you can add specific certification to add more value to the resume. Here are the main certifications you can add to the Data Scientist profile to get greater attention from employers.

- IBM Data Science Professional Certification
- Harvard X's Data Science Professional Certificate
- Tableau Data Scientist | Desktop Specialist Microsoft Certified Azure Data Scientist Associate
- MCSE: Data Management and Analytics by Microsoft
- Amazon AWS Big Data Certification
- SAS Academy for Data Science
