

4. **Virtual Reality** – Including VR-based shopping on e-commerce sites is the next-gen thing in UI designs. Suit yourself to learn more about it.
5. **Augmented Reality** – This is also a next-gen tech that is revolutionising product designs.
6. **Neumorphism** - New skeuomorphism is the virtual reality way of transforming the elements into lifelike objects.
7. **Asymmetrical layouts**- You need to align to the baseline always. Think out of the box! Practice makes a man perfect, So keep practising until you master the skill of asymmetric layouts.
8. **Storytelling** – Include stories about your brand in the layout that keeps the users tied to your product for a long time.

Some books to read

There is no great mentor than a good book. To gain massive information within a short time, seeking books is the best option. Here, we suggest a few books that will help you in learning UI design.

1. **Don't Make Me Think (Revisited edition)** — By Steve Krug. Our fundamental focus is the user, and this book will be a huge help to align with that primary focus of ours. How to create UI designs that are user-centric can be learned through it. For instance – “Use words that are easily understood by the user than the technical jargon”.
2. **Better Web Typography** — by Matej Latin. Typography is more science than art! There is a lot more that needs to be done in them professionally. Get this book to know where you lag in your typography skills.
3. **Steal Like an Artist: 10 Things Nobody Told You About Being Creative** — By Austin Kleon. This is a modern age book that helps many young designers to stay motivated and creative.

Apart from books, few YouTube channels are a great deal of help. You can also learn from these online courses:

1. Hackdesign
2. Coursera
3. My.path
4. Skillshare
5. Gymnasium

Creating your portfolio

This may be the final step in being a UI designer but a great way to begin a career as a designer. Create eye-catching portfolios with projects you have
