

- Go - Go language has been one of the most used programming languages for DevOps and is mainly chosen for its lean and efficient network runtime.
- Java - Java is an object-oriented programming language. It is class-based and general purpose. Java is mostly used for the level of versatility and the power that it provides.
- C - C is a fast and high-performance language and has also remained one of the most popular programming languages. C, as a language, has been the foundation of modern computing and has been one of the most used languages by software developers.
- SQL - SQL, i.e. Structured Query Language has been responsible for storing, manipulating, and querying data from the relational databases. SQL is used for container support.
- Bash - Bash is a Unix shell, and a large number of Linux systems use its shell and scripting.
- PERL - PERL is one of the cross-platform programming languages and is a high-level programming language. PERL is a general-purpose and dynamic programming language. PERL is used for the development processes in DevOps.
- PHP - PHP is a general-purpose programming language and for internal system processes. PHP is also used for non-specific coding and development.

How to be better at the tools used by DevOps engineers

Let us now look upon the tools that are used by good DevOps engineers to perform their tasks swiftly and in the best possible ways. You can learn how to get better at using the following tools using a number of resources, including courses from Udemy or Coursera.

The tools that you should use to be better at DevOps are:

- Jira - Jira is a software tool developed by Atlassian and is used for agile project management, and also for bug and issue tracking. You can learn more about Jira and how to get better at using it at <https://dgit.in/atlassian> or do a course at Udemy or Coursera.
- Trello - Trello, also a part of Atlassian is used for list-making and project organization. Trello will help you increase your project management, and understanding it completely will make you have an upper edge. Referring these articles will make you understand Trello in a better way: <https://dgit.in/trelloatat>.
