

having quantity. Practically this means, finding a bug like “a remote code injection” is better than a bug like many “weak authentication access points.” You can get to know about the quality of bugs if you study more about them. These bugs are categorised based on the priorities. A bug with low priority (P6 usually) will be of inferior quality and is not given adequate concern. Bugs with P1 and P2 priority ratings are considered super severe and get higher priority. Overall, the priority ranges from P1 to P6 in most of the online bug hunting platforms.

- **Earn respect and points:** A bug hunter can raise their dignity in the bug hunting community by finding more valuable bugs for renowned companies. There are many different online bug hunting platforms (will be discussed later) that provide badges, hall of fame, and other such rewarding points to boost the enthusiasm and zeal of a bug hunter as well as a dashboard where you can see your rank. Some companies or businesses might not pay the required amount, or points you deserve after a successful bug report. In such a case, avoid contradicting their way of rewarding as every company and organisation has their pay slab for bug hunters. Getting badges, hall of fame, and points will draw you closer to better competition, which you can witness after logging in to the dashboard.
- **Make sure you regularly do your home-work:** If you are not comfortable with the primary methods and tools for testing the bugs, work on it to make yourself comfortable. If you think, your networking skills and fundamental ethical hacking skills are not up to the mark, brush them up and get familiar with the required techniques and terminologies first, before digging deep into bug hunting. A good understanding of protocols like TCP, UDP, and [HTTP](#), along with some programming languages and web scripting languages, will be an additional benefit. Most of the bug hunting programs focus dedicatedly on web applications. So, elite bug hunters recommend going through the web application development methods first before getting your hands dirty on bug testing. That is because you must know how a system gets developed before testing its weaknesses.

Tools used in bug hunting

There is a wide range of tools different bug hunters use as per their comfort, requirements, and situation. Here are the names of some top tools used in finding bugs.
