Popular platforms and locations for bug hunting

There are two different locations where you can find such bug hunting programs. One is the online bug bounty platforms, which act as an intermediary content hosting website. The companies register their names and domains which they want to get tested. The ethical hackers, i.e., bug hunters or bug-researchers, register on the other side of such platforms. These bug hunters examine the security loopholes in their applications and domains, highlighted by the pre-registered companies, in that platform. These are online websites where different companies host their security testing programs, and award points, hall of fame, and money to those hackers who report valid bugs. Some of the most comprehensive bug hunting platforms are:

- HackerOne (<https://www.hackerone.com>)
- BugCrowd (<https://www.bugcrowd.com/>)
- SafeHats (<https://safehats.com/>)
- Intigriti (<https://www.intigriti.com/>)
- Synack (<https://www.synack.com>)
- Cobalt (<https://cobalt.io>)
- Hackenproof (<https://hackenproof.com>)
