

Elementary platforms for preparing bug hunting skills

At the time of learning, you might encounter situations where the bug hunting platforms (listed above) will not be suitable or easy enough for practicing, understanding, and retaining what you have learned. In such a case, practicing bug hunting on tools and applications providing vulnerable dummy scenarios becomes helpful. Here are the systems that will provide a simulated environment to practice and test your skills as a beginner bug hunter and will warm you up against the real-world bugs.

- Webgoat
- OWASP Juicy Shop
- HackTheBox
- Rootme
- BWAPP
- Hacker101
- Penetration Testing Practice Labs
- Hacksplaining
- Damn Vulnerable iOS App (DVIA)
- Trytohack
- Mutillidae
- SQL Injection Practice

Dig a little deeper

Now, once you get the baseline and set your hands on the bug hunting skills, the next thing a professional, dedicated bug hunter will do is they will start looking out for other hackers and bug hunters and will try to figure out more about hunting. This aspect includes several topics such as:

- How to figure out what other hackers and bug hunters are trying fresh and unusual?
- Which companies and platforms are offering new bug hunting programs?
- What kind of techniques and methods bug hunters are using to find bugs in the wild?
- What difficulties and obstacles the bug hunters are facing with the change in security trends?

For all these queries and curiosities, you need to surf different forums, blogs, and websites. Here is a list of collective write-ups, doubts-resolving sites, and tutorials on bug hunting that you should read.
