

the testing team and the external team. In this role, you will be required to have strong communication skills as well as the ability to work with the external stakeholders on delivery of important tasks. This role will provide you with an acquaintance into the expectations and responsibilities of the different teams.

After this, with 8-10 years of experience, you will become a test manager with important roles and responsibilities to work on key projects along with other stakeholders. In this role, as you progress through senior management roles too, you will work on important business goals. The responsibilities will vary depending upon the size of the company and the geography and functions that you serve.

Ultimately from here, you could become the Assistant VP and VP within your organisation, overseeing the strategy and business outreach of your company. Your technical and project management expertise will come valuable in making key decisions that will impact your company's profitability and market growth.

Why should you become a software tester?

Software testers play a crucial role in the success of any application or product roll-out. Their importance is not only to find and remove bugs but also to identify and design or user interface, functionality glitches which may impact the perceived user satisfaction with the product.

Formerly, the role of testing was reserved for the end of the software lifecycle development cycle where they would perform the different kinds of testing such as: stress, performance, functional, scalability, penetration testing, API testing and user acceptance testing.
