

Regression testing is crucial as it helps ensure that the API is functioning without any breakdowns.

3. Compliance Testing

Compliance testing helps validate whether the developed API is in adherence to the prescribed standards or not. Compliance testing can be related to organisational, local, national, and international laws depending upon the scale and usage. It is a form of non-functional testing done to ensure that the API complies with the required standards.

4. Load Testing

Load testing is used to test the behaviour of the API under an actually expected load. It helps analyze the working of the API under normal and peak load conditions. Similarly, sometimes a change in the code can affect the performance. Thus, to ensure that the new code works perfectly fine and there are no unexpected crashes in real-world use, load testing is carried out. Some of the key features of SoapUI for load testing are:

- End-to-end system performance monitoring
- Advanced custom reporting
- Simulate high-volume testing

How to install SoapUI on a computer?

SoapUI can be installed seamlessly on either Linux, Windows, or macOS operating systems as you would install any other program. Download the installer. Then, open the installer and follow the instructions (Click 'Next' for all steps). Click on 'Finish' to complete the installation. After the installation is complete, you will be greeted with the SoapUI home interface.

The latest version is 5.6.0. It is available to download from the website. You can download the application for an operating system of your choice from this link: <http://dgit.in/dlsoap>

The link directs to the open-source version of the program. However, you can purchase or try the pro version for 14 days from the SoapUI website. Ensure that you have at least 1GB of RAM and about 100 MB of disk storage space free on your machine with Java Runtime Environment (JRE) version 1.6+ installed to use SoapUI.

Which APIs can be tested on SoapUI?

With SoapUI, you can carry out complete REST and SOAP API testing.
