

This concludes SOAP API testing with SoapUI.

How to test the REST API on SoapUI?

Similar to SOAP API testing on SoapUI, REST API testing, too, is fairly simple. Here's a step-by-step guide to test REST API on SoapUI.

1. Create a REST project.

Go to the Menu toolbar -> Click on File -> New REST project. You can also create a new REST project with the Ctrl+Alt+N keyboard shortcut quickly.

2. In the dialogue box, enter a WADL in the URL field or import an already downloaded WADL from your computer and click OK. For example; <https://petstore.swagger.io/v2/swagger.json>
