

At this point, you might be wondering what WADL is. WADL stands for Web Application Description Language. A WADL file is to REST what WSDL is to SOAP projects. In simple terms, it is used to describe REST web services.

- 3. If the WADL is added successfully, you should see the project hierarchy in the navigator tab under 'Projects' in such a manner.

- 4. Next, you have to create a resource. For that, you need to right-click on
