How to become a bug hunter?

If you are dreaming of becoming an ethical hacker, yet you want to work as per your comfort, without changing your name to any pseudonym, bug hunting is an ideal option. Here you will discover vulnerabilities in software and web applications as well as win rewards and pay-cheques. So, who can become a bug hunter? Anyone having a sound skill in computer science and having a tremendous level of curiosity in testing applications and websites for bugs can become a hunter.

You may be a budding ethical hacker of twelve years or an old elite cyber expert of fifty; anyone can become a bug hunter if they have the proper skill set of detecting, testing, and reporting bugs to the owner or business. The foremost requirement one will require to become a bug hunter is the agile learning mindset with patience. So, now you might think about what other skills you need to become a bug hunter. Well, here are some of the points that you have to follow to become a good bug hunter.

- **Learning the tools and methodologies:** Agile learning should be the nature of a bug hunter. Apart from this, a bug hunter needs to be proficient in various tools and methods. These hacking tools and techniques are designed especially for exploiting vulnerabilities in a system.
- **Submit bugs with easy-to-understand PoC:** Proof of Concepts (PoC) is essential when you find a bug. Based on that, the security officer or the system engineer will verify the bug. A clear bug explanation in the proof of concept makes it easy for the security officer to get clearance as well as smooth enough to get pay after reporting the bug. It is also essential to keep in mind that a bug with quality is better than multiple bugs, i.e.,
