

tab -> Click on 'Send'. You will receive a successful raw response.

10. Click on the 'Save request' button to save it.
11. Next, you will need to add properties and parameters. For instance, you can create custom properties such as 'HTTP headers' from the 'headers' tab.
12. Next, you need to add an assertion to validate the content of the response. Click on the '+' option to add an assertion. In the pop-up dialogue box, add the relevant assertion.
13. Run the test case and check whether the assertion passes or not.
