

1. Use right-clicks

This may look like a no-brainer and a simple tip. However, most beginners do not maximise right-click to its full potential in SoapUI. Wherever you are in the SoapUI interface, right-click the options, buttons, and menus. You will be surprised as to how much more you can do with a simple right-click in SoapUI. Working on the software, in general, will become easier than ever before with right-clicks. Alternatively, you can familiarise yourself with keyboard shortcuts to speed up the testing process.

2. TestCase is where your tests should be

To make your API testing as smooth as you can, follow the TestSuite, TestCase, and TestStep structure. First, you need to have a group of tests called the TestSuites. The TestSuites contain the actual tests, the TestCases. The TestCases, in turn, contain steps, appropriately called TestSteps. When you start creating an organized structure for API testing, you can navigate easily through the system UI. Plus, you have a clear understanding of the test, its method, and its purpose.

3. Always Assert

Testing is incomplete without assertion. Assertion helps verify that the test results that you received are in line with the expectations. Moreover, creating an assertion is fairly simple in SoapUI. Just click on the 'Assertion Tab' in the request/response editor to create an assertion.

4. Read the Response

SoapUI provides the testing results in a detailed step-by-step format. Analysing the test response can help identify what went wrong during the tests. Similarly, it can also help verify that everything went as planned.

5. Read the Log

Logs are detailed version of responses. They provide in-depth information about every process and event happening during API testing. Reading the logs is a great way to improve your knowledge about SoapUI and API testing in general.

6. Be Active

Be active in searching for new information about SoapUI from wherever possible. There are a large number of resources available on the internet related to API testing and SoapUI. You can start by reading blogs and news articles related to SoapUI on the official SoapUI website.
