

Nonetheless, our Fasttrack is not about software today. It is rather about one aspect of making and delivering a perfect software, which is also known as software testing. Companies that make software have teams dedicated to each segment of software creation, with one of these being software testing. This team is responsible for ensuring software works in all the given test case conditions, without any glitches whatsoever.

Resources you need to become a good software tester

No matter how easy it sounds, becoming a software tester is quite a task. To become a tester, you must know extensively about software, especially the one in question. Of course, you will be given test cases, but to be able to execute both black box and white box testing procedures, you must also have an overall idea about all of it. Although quite difficult at first, it gets a lot easier with the right kind of resources and regular practice.

Here is a list of ten invaluable resources that you can access to become a better software tester.

1. **Video tutorials:** Videos make our lives so much easier with their concise content structure and the scope to understand and interact better. When coupled with the idea of tutorials, it becomes enriching and immensely helpful. Video tutorials help you gauge the topic better by grilling the important snippets into your head. These imprints further help you apply the lesson to a real situation while working on testing software. Video tutorials are indispensable for the beginners. It makes the concepts crystal clear, thus helping you to understand the real deal within a short period of time.
2. **Webinars:** While video tutorials do a great job in teaching you the concepts related to software testing, webinars help you identify the hacks to get the job right. A webinar that is related to your field of interest is a huge additional incentive that can change a lot of things in your career. However, there are a few things to keep in mind. Since webinars are supposed to deliver quality information to you that you will inevitably need in your profession, choose them wisely. Always register for webinars that are organised by institutions certified for software testing, and/or the ones conducting the webinars, and delivering the information to you must be of repute in the industry. They must have a proven track record in software testing and must also have worked on complicated projects.
3. **Online and offline courses:** There is no better way of learning than taking appropriate courses for the same. With the Internet becoming the
